TRBOnet *Watch 3.0*

September 2017

The Neocom team is delighted to announce the availability of the new version of TRBOnet Watch.

Highlighted Features

Release of TRBOnet Watch Mobile for iOS and Android devices.

Supported features:

+ Shows the number of voice calls over the last 1, 8 and 24 hours
+ Diagnostic and RDAC information for repeaters
+ System availability information

Added support for Swift IP Gateway A200.

+ GPIO pins (read only)
+ Channel information (digital mode only)

Added User Management.

The administrator can create user accounts, check their activity and lock users out.

RSSI Maps and GPS reports are now available for Linked Capacity Plus and Capacity Max systems.

The feature requires that Watch Server be connected to TRBOnet Enterprise/PLUS Server 5.2 or newer. NAI Data keys must be enabled on all repeaters.

Supported reports:

+ RSSI Levels: Map
+ RSSI Levels: GPS
+ GPS Data

Added Concurrency Report.

It shows how many channels are busy at any moment.

New filter options:

+ Filter by day
+ Show calls from subscriber radios only

Other changes

Improved performance for the **All Channels Busy** report.

Notes

License keys created for Watch 2.5 and older are incompatible with Watch 3.0. Please contact your Neocom sales team if you require an updated license.

Voice Recording is no longer supported by Watch 3.0 or newer.
